

## Press release

La Chaux-de-Fonds, May 2016

### **FKG Dentaire SA is expanding its range of dedicated canal filling products, with the introduction of TotalFill® BC RRM Fast Set Putty™**

FKG Dentaire believes that filling is a fundamental stage of endodontic treatment.

The TotalFill® range products, introduced by FKG Dentaire in 2014, belong to the bioceramics family. Bioceramic filling materials are recognised for their numerous properties essential for ensuring the long-term success of an endodontic treatment.

TotalFill® BC RRM Fast Set Putty™ is highly biocompatible, bioactive, antibacterial and has excellent physico-chemical properties. Just like the other products in the TotalFill® range, Fast Set Putty™ does not shrink upon setting, it is hydrophilic and provides remarkable adhesion to the dentine tissue.

Its exceptional chemical properties guarantee a drying time of approximately 20 minutes, a genuine revolution ensuring rapid and efficient deployment.

An additional asset of Fast Set Putty™ is its ease of use. It comes premixed, so does not require any preparation, and ensures optimum consistency in every application. Its injectable syringe format with a capacity of 0.3 g prevents material loss, and limits risks of cross contamination.

*"Fast Set Putty, is a revolutionary addition to the TotalFill range. It is premixed into the perfect consistency, can be expressed from the syringe to the exact amount required and will harden in record time making it one of the best bioceramic filling materials available»* attests Doctor Martin Trope, clinical professor at the University of Pennsylvania.

TotalFill® BC RRM Fast Set Putty™ is dedicated to root repairs. It is ideal for canal back treatment, pulp capping, and repairing canal perforations and resorptive defects.

This premium product joins a growing list of innovative high-quality products to meet the needs and requirements of dentists and endodontists worldwide.
