

Press release

FKG Dentaire expands its endodontic motor range with the new **Rooter® X3000**

A cordless endodontic motor, which can reach high speeds.

La Chaux-de-Fonds, Switzerland, September 2021.

FKG Dentaire SA presents the Rooter® X3000, redefining endodontic standards. This novel cordless endo-motor combines technology, functionality, and adaptability in a 20-centimeter unit. It stands out for the fastest speed on the market (3000 rpm), 10 programmable memories, and preset programs for different types of FKG files. Its ergonomic design, light weight, and 360° rotatable extra-slim contra-angle head ensure perfect handling and visibility.

Every new FKG product responds to the most exacting needs of endodontists with leading-edge technology and uncompromising quality. The **Rooter® X3000** advances endodontics with a new cordless, brushless endo-motor with integrated apex locator achieving a speed of 3000 rpm.

Adaptability as technical keyword

Benchmark speed coupled with guaranteed stability and precision are only the tip of the iceberg of **Rooter® X3000** features. Adaptability reflects its core, starting with the four FKG presets: XP-endo® Treatment, XP-endo® Retreatment, RACE® EVO, and R-Motion®. This saves time for endodontists, who can rely on manufacturer's predefined recommendations for each file type. The endo motor also provides 10 user-programmable memories for all modes (EAL, CW, CCW, REC, or ATR), more than 60 speeds, and—of course—a high-precision built-in apex locator and a range of automatic apical functions.

Agility as practical credo

As with any device, practice validates innovation. With its ergonomic handpiece weighing only 157 grams, perfect balance, and fully rotatable ultra-slim contra-angle head, the **Rooter® X3000** ensures a

comfortable grip, agile handling, and excellent visibility of the operating field. FKG has designed and developed all details to provide maximum freedom of use to the practitioner, optimizing both speed and efficiency. Features include complete adaptability of the device and its display for both left- and right-handed users, a broad range of user-controlled settings, extensive file brand compatibility, wireless charging stand, and volume control.

About FKG Dentaire SA:

Founded in Switzerland in 1931, FKG Dentaire SA gained a new momentum in 1994, when the Rouiller family took over the reins of the company. The family propelled FKG to the forefront in the development, manufacturing and distribution of dental products destined for general practitioners, endodontists and laboratories. The FKG strategy is centered on innovative high-precision products and the creation of machines designed specifically for the dental field. Its aim is to offer solutions that meet the most demanding needs of end users.
